

# \$PATA

# What is \$PATA?

Imagine two young visionaries, Federico and Dario, determined to change the world with a touch of irony. Pata, the Token par excellence, was born from this vision. Coming from space, Pata is here to address the follies of our world and to remind us how much we are trivializing our existence, damaging the planet that hosts us. With her big teeth and surprised eyes, Pata is ready to get noticed and climb the Token charts, bringing a powerful message: we must improve our planet.

Pata is not just a Token, it is a project with a clear and ambitious mission: to finance research and development of innovative technologies to fight global pollution. Using autonomous drones and machine learning models, Pata will scan seas and oceans to identify and locate pollutants, providing crucial data for solving environmental problems. This data will be shared with universities and research centers to further study the marine ecosystem. And this is only the beginning. Thanks to the liquidity generated by \$PATA, we will develop further projects to protect our planet.

# Our Team and Vision

The Pata team is made up of two young entrepreneurs, Federico and Dario, with a vision oriented towards the future and technological innovation. Federico, software engineer, startupper and software developer, and Dario, journalist, drone pilot, photographer and videomaker, have combined their skills to create something extraordinary. In 2020, they founded a startup with the aim of carrying out delivery and monitoring via autonomous drones. The startup has designed and created a system capable of making deliveries on routes of over 50 km, culminating in the success of the first autonomous delivery between Livorno and the island of Gorgona. After completing the life cycle of the startup, transforming it into a company that creates systems for both civilian and military customers, they managed to carry out monitoring and deliveries within a radius of 100 km, demonstrated with autonomous transport between Livorno and the island of Capraia. Currently, they are developing a system composed of a swarm of autonomous microdrones. With the intention of financing projects, not for profit, but with the aim of helping an ecosystem brought to its knees by human activity, they decided to launch their own token, \$PATA.

Our vision for \$PATA is to create a solid and transparent community, capable of investing long-term in a Token with a real and concrete impact. Not only do we aim to explode \$PATA in the crypto market, but we also want to raise awareness in the community about pollution and the importance of renewable energy. In the next five years, we see \$PATA among the big names in the industry, with its own blockchain and solid value thanks to the solid and significant projects we will realize.

# Why Crypto?

Federico and Dario, the founders of Pata, chose to finance their project through a crypto blockchain rather than relying on large external investors. This decision prevents control of the project from being exclusively concentrated in the hands of a few, instead ensuring a wide distribution of ownership. Decentralizing financing allows developers to maintain control over key decisions, while ensuring a good return on investment for all participants. This way, Pata can stay true to its goals of sustainable innovation and project integrity.

# Strategy and roadmap

The initial phase of \$PATA promotion is crucial. We will use campaigns on platforms such as X and DexScreener, we will collaborate with industry influencers and YouTubers to build a solid community base and attract first investments. Our goal is to move from a Solana Token with a high volatility value to a project with medium-long term investments with solid shoulders and certain returns on investment. Through targeted campaigns and our first official airdrop, we'll create FOMO and solidify our community, preparing for even bigger expansion.

Our roadmap is clear and ambitious. Starting from the launch of the liquidity pool at the end of May, we have studied the competition and prepared targeted content. By the end of July, we will create the first official Airdrop, consolidating our initial community. In 2025, we aim to reach a large community and publish the first results of our systems. At the end of 2025, the consolidation phase will begin, collaborating with universities and research centers, and then explode in 2026 with the development of our blockchain.

Pata was born on the Solana blockchain, chosen for its popularity in the world of tokens. With a total supply of 12.5 billion tokens, of which 10.5 billion were placed in the liquidity pool, we immediately burned on LP. The launch took place at the end of May 2024, followed by advertising campaigns starting on 7 June 2024.

# Our ideals

We invite investors to join us in this unique adventure. With Pata, you are not just investing in a solana token, but in a project with a real and lasting impact. We firmly believe in the potential of \$PATA and are ready to put our skills and transparency into play to ensure the success of this revolution. Let's unite to improve the world, one token at a time.
